

I am concerned about the Commission's proposals in ET Dockets 03-104 and 04-37 concerning BPL. Specifically, how the Commission will protect licensed services from harmful interference from BPL. The Commission needs to devise a way for users of the various licensed services to file complaints about harmful interference from BPL systems and have those concerns addressed quickly. If a BPL operator is not able to address an interference complaint about their system in a timely matter; the Commission must enact strict fines for everyday after notice of interference has been issued until the matter is resolved.

The Commission needs to also address the possibility of interference from licensed operators in the HF bands to the users of BPL systems. The licensed operator needs to be protected legally from action taken against them in an interference matter.

The Commission must also address the interference that mobil amateur radio operators will encounter. As a licensed amateur radio operator who is unable to erect a permanent antenna at my home the only opportunity I have to operate my station is when I am mobil.

Thank you for giving me the opportunity to comment on this matter.
